

Luxcontrol

Enthusiastic about automotive vehicles and interested in the latest developments in automotive industry. **Complex technologies** on one side and the **legal requirements** around the world on the other, with one major objective: deliver a **safer and cleaner environment**.

This describes in a few words our passionate daily work. Luxcontrol, member of TÜV Rheinland Group, is an internationally acting company with representations in the US, China, Japan and Turkey. Our headquarters are conveniently located in Luxembourg to support all European automotive industries. A technical service for more than 30 years, Luxcontrol is nominated by the EU in Brussels and the UN in Geneva to homologate automotive vehicles and their components. We are in close cooperation with the relevant governmental authorities. Additional nominations exist, among others, in Taiwan, Australia and China (JV).

You want to put your career on the fast track and develop some responsibility in a foreign market? You are open-minded? You have a technical background (engineering in mechanics, electronics, IT or similar scope)? Ideally, you already have some experience in the automotive business? And you can easily communicate in English (ideally also French and/or German)?

Then you are the person we are looking for to manage a remote location for Luxcontrol!

In this position, you will be in contact with customers, authorities and our headquarters every day. The operational part mainly consists of project management: planning, organizing, witnessing automotive testing and documenting the results.

Luxcontrol is looking for a person willing to accept a long-term assignment to one of its foreign representations, the US (Detroit) or China (Shanghai or Tianjin).

After an adequate training, first in Luxembourg and later in the overseas office, you will take over a management position.

If you recognize yourself in the description above and an overseas adventure appeals to you, please send us your CV and covering letter using the following link: <http://bit.ly/2w14JYL>
